QEP MATH FOCUS COMMITTEE

February 27, 2008
1:30 p.m.
Hines Computer Lab

Members Present: Allen Gainer, Carol Bates, Will Chapman, Kathleen Hall, Loletta Redmon, Sherry Martin

- We hoped to have students join us for the meeting today, however, faculty needed more time to solicit students to be a part of the committee. Allen Gainer, Loletta Redmon, and Will Chapman will ask several students to serve on the committee and attend the next meeting.

- The draft definition for learning was discussed and several changes made. The revised definition for student learning at JD:

  Student learning is the measurable improvement of knowledge, understanding, or skill-levels of students. In the context of our QEP, student learning will be increased in high risk mathematics as a result of redesign of instructional format, increased learner support, and faculty enrichment. Subsequent mastery of required higher-level mathematics coursework will result.

  The revised definition will be brought before the QEP Leadership Committee for approval.

- Committee members discussed objectives, expected results, means of assessment, tasks, and timelines for years 1-5 of the QEP. The document is attached.

The next meeting will be Wednesday, March 5, at 1:30, in the Hines computer lab.

Respectfully submitted,

Carol Bates
